Need **flexibility** to **create** more **competitive systems**?

The iC7 series of intelligent AC drives puts the power of compactness and integrated intelligence in your hands, so you can boost machine performance in new ways.

With the best heat management available anywhere, this drive delivers high torque performance in a small footprint, so you can get much more power into small spaces.

Integrated intelligence enables the drive to function as your most powerful sensor, meaning you can regulate your process highly efficiently, saving money with fewer external devices. For quick and trouble-free system integration the drives come with built-in EMC and harmonic filters. Enjoy superior EMC performance even for installations with long motor cables.

Manage your process data in the cloud or your internal network with world-class stringent security. The drive supports OPC-UA for cybersecure connection to cloud, get full data traceability with end-to-end integrated digitized quality control throughout the drive lifetime – from design and testing, to installation and service.

iC7 series intelligently serves demanding applications in food and beverage industries, including:

- Bottle sorters and washers
- High-speed cutters
- Centrifuges and decanters
- Dosing pumps and mixers
- Palletizers and packers

These drives also support heavy-duty applications such as

- Air compressors
- High-power pumps and fans
- Cranes and hoists
- Mixers
- Extruders
- Tunnel boring machines
- Progressive cavity pumps
- Electric submersible pumps
- Beam pumps and mud pumps
- Top drives
- Rotary tables
- Drawwork

Secure-by-design

Your drive is equipped with market-leading hardware-based protection against unauthorized access with a built-in crypto chip on the control unit.

The drive supports OPC UA with no need for additional hardware. This capability is a key enabler for cybersecure Industrial IoT, permitting secure communication via direct cloud connection.

-  **Security**
-  **Security video**

Functional safety to match your needs

STO and SS1-t SIL3, PI e as standard makes certification easier. A flexible offering allows the addition of functional safety via fieldbus, as required. PROFIsafe is the first of these protocols available, with more to come.

Enclosed drives are equipped with emergency stop button on the door, to activate STO.

User interfaces

A new range of user interfaces integrate well-known features and functionality. Integration of features in MyDrive® tools is supported.

Halo indicator
Normal = white
Fault = red
Warning = orange

More built-in sensors for enhanced control

The iC7 drive has an increased number of built-in sensors. This enables improved control performance, increased protection of application and drive, and capability to support Industrial IoT solutions.

Superior sensorless control

In open or closed loop, the iC7 drive delivers superior shaft performance even at low speed.

New motor? There's no need to change out the drive. Connect the motor and this drive will automatically self-tune and optimize: induction motor (IM), permanent magnet motor (PM), or high-efficiency synchronous reluctance motor (SynRM).

-  **Motor Control**
-  **Motor Control video**

Filters and accessories

For a complete installation, a range of integrated and separate filter options are available.

-  **Filters**

Engineering support

Danfoss provides an extensive selection of support material and tools to help in engineering, such as:

- Digital tools, such as MyDrive® Select, MyDrive® Harmonics and MyDrive® ecoSmart™
- EPLAN P8 macros
- Dimensional and electrical drawings

Simulation reduces time to market

Remove the constraints of the physical environment and open up new opportunities using iC7 simulation models which perfectly mirror the converter or drive.

You can predict performance, test scenarios, streamline commissioning, and collaborate across teams and locations in an open environment.

Reliably validate interoperability of systems, using high-fidelity hardware-in-the-loop (HIL) simulation support from Danfoss.

The iC7 platform is founded on model-based design, which ensures the simulation models are always valid: up to date and accurate.

These models comply with the FMI standard and are easy to integrate in your simulation platform.

-  **MyDrive® Simulation**
-  **MyDrive® Virtual**
-  **MyDrive® HIL**

Supported by MyDrive® tools

You can use MyDrive® tools on the device of your choice, supporting the entire lifecycle of the iC7 drive; from selection and dimensioning, through programming and commissioning, to maintenance and support during operation.

-  **MyDrive® Insight**

What if sensorless open loop performance could match closed loop?

Quality in focus

Reliable and predictable operation has been a key driver. With an ISO 9001-certified and IATF 16949-compliant quality system combined with use of 6-Sigma principles, quality and reliability are at absolute market-leading standards.

Reliability is assured by design based on application load profiles and data collected from intensive simulations and feedback from testing.

Automated assembly enables close control and monitoring of critical processes. The finished drives are 100% full-load tested ensuring reliability before leaving the factory.

▶ Quality video

Scalable and flexible control

Enjoy a new level of performance thanks to the rapid-response control of iC7 drives.

The control capability is scalable and equipped with EtherNet-based fieldbus and STO inputs as standard. Add more I/Os as needed, to match your applications.

For frequency converters, an optional basic I/O board offers typical I/O connectivity, and if more is needed, then you can add up to 4 options (for enclosed drives, add up to 6 options).

For air-cooled system modules, an expandable bus includes I/O, fieldbus, and expanded safety options. There is space for up to 10 control options.

Configure fieldbus protocol from the factory: Modbus TCP, PROFINET, Ethernet/IP, and PROFI-safe.

Switch fieldbus without changing boards

Change fieldbus in the field, simply using a license key. There is no need to change out boards. These protocols are available for activation by license key: PROFINET RT, Modbus TCP, EtherNet/IP, EtherCAT and OPC UA.

Connect to a computer via the extra Ethernet port, enabling you to use MyDrive® commissioning or service tools.

Features to **enhance competitiveness**

Feature	Benefit
Secure-by-design	Reduce risk of downtime due to unauthorized access
Integrated Ethernet communication interfaces	Save costs and time in installation
STO and SS1-t SIL 3, PI e as standard. Emergency	
PROFIsafe and Ethernet IP protocols are integrated, activated by license key	Save time: no need to change hardware
High number of integrated sensors	Improve performance and control accuracy
Highly accurate motor control	Save costs and improve performance
Modular control architecture	Improve performance by adapting to your application's needs
High power density	Save space and reduce cooling costs
Compact side-by-side mounting	Save space and reduce installation costs

Ensuring you shine in the marketplace is our goal. Learn how Danfoss supports your success [here](#) 

Application software – **for a perfect match**

Industry application

Designed for maximum machine performance and flexibility, the Industry application is the versatile choice for all applications requiring high-performance speed and torque control. Furthermore, it focuses on the control of external control loops: an advanced process controller enables full auto tuning.

Common features of both applications

- High-performance open- and closed loop motor control with advanced automatic motor adaptation
- Wide range of customization, from signal naming to application software modifications.

 **Read more about applications**

Motion application

Choose the Motion application to achieve optimal performance for single-axis linear or rotary positioning and synchronization tasks.

It gives you:

- Absolute and relative positioning
- Position synchronization
- Multiple types of Homing
- Superimposed movement
- Touch Probe functionality
- Scaling and use of physical units
- Easy to order and activate: simply enter the license key

Active Front-end application

The Active Front-end application ensures a stable DC-bus for inverter modules, as well as effortless interaction with the grid, even in less-than-ideal grid conditions. It is designed for grid compliance and establishes grid-friendly harmonic content. It also safeguards energy recovery back to grid when excess energy from the process is available. It delivers robust control which is easy to customize and commission, with quick start-up and parametrization using wizards.

- Robust DC-link regulation
- Ultra-low harmonic current distortion THDi
- Unity power factor
- Support for grid voltage feedback option
- Power and current limitation
- Automatic AC-grid synchronization

iC7-Automation **variants**

iC7-Automation is available in several variants to suit a broad range of applications:

- Frequency converters – optimized for wall-mounted, cabinet-mounted or free-standing installation
- Air-cooled system modules – ideal for ultra-compact cabinet integration
- Enclosed drives – optimized for minimal footprint and ease of serviceability

iC7-Automation	Frequency converters	Air-cooled system modules	Enclosed drives
Voltage	3 x 380-500 V AC -15%/+10%	380-500 V AC -15%/+10%	3 x 380-500 V AC -15%/+10%
Output current	1.3-1260 A	385-4870 A	206-1710 A
Protection rating	IP 20, UL Open Type IP21, UL Type 1 IP54, UL Type 12	IP00, UL Open Type	IP21, IP54

For specifications, dimensions, and a key to the model code, refer to the iC7 Selection Guide 

MyDrive® Suite – Digital tools empower you

Need help to design your application, or select, set up, and maintain your drive? Danfoss provides a palette of digital tools to give you the information you need, at your fingertips. No matter which stage of the project you are at.

Select and dimension your drives

- Select the right AC drive based on motor and load characteristics
- Find general product, industry, and application information for drives from Danfoss

☑ MyDrive® Select

Select and dimension your drive and motor based on calculated motor load currents as well as current, temperature and ambient limitations. MyDrive® Select matches your business needs with Danfoss Drives products.

☑ MyDrive® Portfolio

This smart device app gives you a full overview of all Danfoss Drives products and their documentation.

Set up and service your drives

- Set up your drives to operate according to your requirements
- Monitor drive performance throughout the entire lifecycle of your drive

☑ MyDrive® Insight

Get easy access to parametrize your Danfoss AC drives or power converters, locally or remotely. Use MyDrive® Insight for commissioning, monitoring, and troubleshooting.

Validate performance of your drives

- Analyze the performance of your drives in relation to harmonics content
- Calculate the energy savings to be achieved when using drives
- Validate compliance to norms and standards

☑ MyDrive® Harmonics

Estimate the benefits of adding harmonic mitigation solutions from the Danfoss product portfolio and calculate predicted system harmonic distortion. This tool provides a quick indication of installation compliance with the most recognized harmonic norms, and mitigation recommendations.

☑ MyDrive® Energy

Estimate the energy savings and CO₂ reduction achievable by installing Danfoss drives to perform variable speed control of electric motors. Calculate efficiency class and part load efficiency for drives from Danfoss. MyDrive® Energy supersedes the tools MyDrive® ecoSmart and VLT® EnergyBox.

☑ MyDrive® Simulation

MyDrive® Simulation is an online simulation tool for iC7 series drives and power converters. Create, run and analyze simulations in an intuitive and collaborative environment with no need to download and install software.

DrivePro® Services

Delivering a customized service experience!

Every AC drive application is different. DrivePro® Services is a collection of **tailor-made products designed around your needs.**

From optimized spare part packages to condition-monitoring solutions, we deliver customized service offerings to **support your business through the different lifecycle stages of your AC drive.**

DrivePro® Site Assessment

Optimize your maintenance strategy with a complete onsite survey and risk analysis of all your AC drives collected in one detailed report. Together with a Danfoss expert, you can build a tailored plan for future maintenance, retrofits, and upgrades.

DrivePro® Start-up

DrivePro® Start-up includes a full range of operating health checks and parameters adjustments. Based on a manufacturer's commissioning checklist, our experts will inspect and test your AC drive and its motor performance to ensure the best configuration of your AC drives.

DrivePro® Spare Parts

Maximize uptime and maintain peak performance throughout the lifetime of your AC drives with DrivePro® Spare Parts by making sure you are equipped with the original spare parts from Danfoss Drives.

DrivePro® Exchange

Maintain uptime with a fast alternative to repair when there is a time critical situation. If an AC drive fails, the DrivePro® Exchange service can quickly exchange any AC drive to a new unit of the same type to ensure as little production delay as possible.*

DrivePro® Extended Warranty

Even the best performing AC drives need protection. DrivePro® Extended Warranty offers a wide range of warranty options and provides the longest coverage in the industry up to 72 months.

* DrivePro® Exchange is available for iC7-Automation Frequency Converter only

To learn which products are available in your region, please reach out to your local Danfoss Drives sales office or visit our website.

iC7-Automation

Open a new dimension of performance

Whatever the environment, the robust iC7-Automation delivers the reliability and performance you need. With broad connectivity, hardware-based security, and dynamic intelligence, this drive lets you take advantage of the latest in Industrial IoT.

Frequency Converters

Need flexibility to create more competitive systems?

The iC7 series of intelligent AC drives puts the power of compactness and integrated intelligence in your hands, so you can boost machine performance in new ways.

With the best heat management available anywhere, this drive delivers high torque performance in a small footprint, so you can get much more power into small spaces.

Integrated intelligence enables the drive to function as your most powerful sensor meaning you can regulate your process highly efficiently, saving money by reducing external devices.

For quick and trouble-free system integration the frequency converter comes with built-in EMC and harmonic filters.

Manage your process data in the cloud or your internal network with world-class stringent security.

You get full data traceability with end-to-end integrated digitized quality

control throughout the drive lifetime from design and testing through to installation and service.

Frequency converters in the iC7 series are optimized for wall-mounted, cabinet-mounted or free-standing installation, and meet requirements for operation at ambient temperatures up to 140°F.

HIGHLIGHTS

- **Modular and configurable drive**
- **STO SIL3 as standard**
- **Scalable control platform**
- **Powerful hardware-based security including end-to-end encrypted data transfer**
- **Connectivity with multiple fieldbuses**
- **Industrial IoT-ready**
- **High-torque machine performance**
- **Superior motor control**
- **High power density with a small footprint**

Intelligence

to empower your application

iC7 series frequency converter, frame FA03b

Configured to your needs

The iC7 drive is configured and delivered to meet your exact requirements, saving expensive installation time. Everything can be integrated: EMC and harmonic filter, brake chopper and DC terminals. Fuse and disconnect are also available built-in, for IP21/UL Type 1 and IP54/UL Type 12 enclosures.

Control is highly configurable and preconfigured at the factory or can easily be upgraded in the field.

Enclosures fit for installation

Install this space-saving drive easily in cabinets and protected rooms:

- Bookstyle IP20/UL Open Type optimized in width for side-by-side mounting without clearance, to save cabinet space
(Frames FA02-FA12)
- Designed for flexible installation with minimum use of space
 - IP21/UL Type 1 for frames FK06-FK12
 - IP54/UL Type 12 for frames FB09-FB12

High power density cooling

You get high power density thanks to superior heat management using heat-pipe technology and high-performance heat sinks. Closed air ducts enable flexible mounting, and back-channel cooling supports removal of heat to the surroundings without extra cooling equipment. Remove fans easily for cleaning and service.

Fast installation and service

Focus on ease of installation and service has been a key driver during development, with intensive installation testing during the design phase to ensure easy installation and user access.

Control connectors are pluggable. Power connectors are also pluggable for units up to 43 A (30 HP). Connectors are color-coded and clearly marked for easier identification.

Power connectors are rated for use of copper cable at full current plus 25%, matching updated installation standards.

Environmental exposure

The iC7 drive delivers exceptional performance under demanding operating conditions, and its design criteria match the environments described in the IEC60721 standard.

The ability to operate at rated temperatures ranging from -22°F to 122°F (up to 140°F with derating) ensures the drive meets a broad range of application requirements. With an altitude capability of up to 4400 m (14,440 ft) above sea level, you can install this drive in virtually any location. For additional protection, specify the optional coated printed circuit boards increasing corrosion resistance.

This robust drive matches the required vibration resistance for operation in cabinets, in control rooms and on machines.

Next-level reliability

- Rated temperature -22 to +122 °F (up to 140 °F with derating)
- Altitude 14,440 ft
- Optional coated PCBs for increased protection

Supports these communication protocols with no additional hardware

Ethernet/IP

EtherCAT

Modbus

OPC UA

Features and benefits

Feature	Benefit
Compact side-by-side mounting	Save space and reduce installation costs
Compact bookshelf design reduces footprint	Reduce space requirement and air-conditioning load
Isolated cooling channel minimizes required installation space	
Integrated options such as functional extensions, common-mode filters, fuses and disconnects mean no extra external devices are required	Save cost and time in installation
Installer-friendly design includes pluggable control terminals, pluggable power terminals ¹⁾ , and replaceable fans	Save cost and time in installation and service
Robust by design, high uptime and quality	Reliable in heavy-duty service

¹⁾ For frames up to FA05.

Key specifications

Input	
Voltage rating	380-500 V AC, +10%/-15%
Supply frequency	50/60 Hz
Switching on input	1-2 times pr. minute
Grid type	TN, TT, IT, Delta

Output	
Output frequency	0-590 Hz
Switching on output	Unlimited
Overload capacity	110% and 150/160%

Protection ratings	
Frames Fx00	IP20 – UL Open Type
Frames Fx01	IP21 – UL Type 1
Frames Fx02	IP54 – UL Type 12

Environmental conditions ¹⁾	
Rated temperature	-30 to 50°C (-22 to 122°F) ²⁾
Nominal temperature 24 hours	-30 to 45°C (-22 to 113°F) ²⁾
Maximum temperature with derating	60°C (140°F)
Rated altitude	1000 m (3300 feet)
Maximum altitude	4400 m (14400 feet) with derating
Relative humidity	3K22, (3K3) ¹⁾ , maximum 95% non-condensing
Particles (IEC 60721-3-3:2019)	Solid particles (nonconductive particles/dust) 3S6, (3S2) ¹⁾
Chemically active substances (IEC 60721-3-3:2019, ISO 9223:2012)	– C3 (P1) – Medium corrosivity – Non coated (3C2) ¹⁾ – C4 (P2) – High corrosivity (3C3) ¹⁾ – Coated in IP54/IP55/UL Type 12 enclosure or for IP20/UL Open Type and IP21/UL Type 1 following installation guidance.
Shock & vibration (IEC 60721-3-3:2019)	3M12 (3M4) ¹⁾

Functional Safety I/O	
STO	Dual-channel, with galvanic isolation
STO feedback	Single channel, with galvanic isolation

External supply	
Rating	24 V/2 A

Basic I/O	
Digital inputs	4+2 ³⁾
– Logic	NPN/PNP selectable – 0/24V
– Pulse/Encoder input	0-110 kHz

Digital outputs	2 ³⁾
– Logic	NPN/PNP selectable – 0/24V
– Pulse output	0-100 kHz

Analog inputs	2
Voltage mode	0-10 or ±10V, scalable
Current mode	0/4-20 mA

Relay output	2
Function	NO/NC
Rating	250V AC 2 A, 24VDC 2 A

Analog output	0/4-20 mA
---------------	-----------

¹⁾ The environments used as reference for the design criteria are described in standard IEC 60721-3-3:2019, unless otherwise specified.
For references based on IEC/EN 61800-2, see the value in brackets or refer to the [Design Guide, section 8.3.8.4](#)

Example

“C3 (P1) – Medium corrosivity – Non coated” refers to IEC 60721-3-3:2019 “(3C2)” refers to the older IEC 60721-3-3:2019

²⁾ Frames Fx09-Fx12: For low overload conditions, the maximum permissible ambient air temperatures without derating are 40°C (104°F) average over 24 hours duration; and 45°C (113°F) for 1 hour duration, respectively.

³⁾ 2 of the inputs can be reconfigured to outputs

EMC category (model code)	Frame	EN/IEC 61800-3 compliance class					
		Conducted emission			Radiated emission		
		C1	C2	C3	C1	C2	C3
		Cable length [m (ft)]

I_L : Rated continuous output current with 110% overload capacity – 1 min every 10 min

I_H : Rated continuous output current with 150/160% overload capacity – 1 min every 10 min

I_{H2} : Rated continuous output current with 150/160% overload capacity with increased duty – 1 min every 5 min

P_L : Typical nominal motor power with 110% overload capacity

Options

Functional extensions	Description
General Purpose I/O OC7C0	General purpose I/O extension board: 3 digital inputs 2 digital outputs 2 analog inputs 1 analog output
Relay Option OC7R0	Relay I/O extension board, with 3 relays
Encoder/Resolver Option OC7M0	Encoder/Resolver extension board supports 1 or 2 encoders, rotary and linear (TTL, HTL, SinCos, SSI, HIPERFACE®, HIPERFACE DSL®, EnDat, BiSS, resolver)
Temperature Measurement OC7T0	The Temperature Measurement option adds 5 temperature sensor inputs with compensation input. Supported sensors are Pt100, Pt1000, Ni1000, and KTY81
Digital 230 V AC Input OC7D0	The Digital 230 V AC Input OC7D0 option adds 5 digital inputs for 42–240 V AC

Air-cooled System Modules

Is fast integration your first priority?

Optimize installation footprint, speed and reduce costs more than you dreamed possible, with the revolutionary iC7 series air-cooled system modules.

High power density combined with industry-leading heat-pipe thermal management means you achieve a smaller footprint and reduce space requirements in your electrical room. The slim profile enables you to fit more modules within a fixed-width cabinet. Shrink your system, with smaller enclosures or fewer enclosure sections, and filters which integrate beneath the module.

Integration and scalability are extremely easy, because each unit is designed and tested in thermal independence. This reduces your engineering, assembly, and testing time.

Thermal excellence saves your operating costs with the unique segregated IP54 (NEMA 12) cooling channel, and reduced heat load in your installation. With the iC7 series air-cooled

system modules, you enjoy industry benchmark cooling efficiency, even including the thermal load of optionally integrated filters and chokes. Configure your choice of common-mode and dU/dt filter options in the integration unit located beneath the module.

With the integration unit, access is so easy: simply pull out the power unit, with no need to remove the power cable. Power terminals are located at the front for easy access.

HIGHLIGHTS

- **Highly compact power unit design requires less space for installation**
- **Increase power by paralleling power units with no need for balancing filters**
- **Integration unit with built-in filters reduces integration cost**
- **Fast power unit replacement with no need for motor cable removal**
- **Front-mounted motor cable terminals**
- **Lightweight power units facilitate faster and easier servicing**
- **Modular and scalable control concept**
- **Efficient heat management with back-channel cooling reduces investment needs in e-room**
- **STO and SS1-t (SIL3) for full power range**

Reduce your engineering effort
to deliver fast and deliver

first

Modular architecture

Setting the **standard** for modular **control**

A flexible, modular, control architecture means you can tailor the control functionality exactly to your needs. You can purchase exactly the control options you need, or replace PLC components, I/O and external safety components.

This modularity gives you not only more flexibility, but more secure integration of drives in the control system and IT architecture. You achieve faster set-up, and smarter monitoring, data gathering and analytics thanks to support for multiple communication network types.

The purchase cost is lower since you only buy the necessary control options, saving excess unused functionality. The drive can reduce your costs further by substituting for a low-end PLC controller/system.

Program execution close to the process opens new possibilities in fast process control thanks to reduced delays. Built-in security protects your IPR and service business.

Features

- Expandable bus includes I/O, fieldbus, and expanded safety options
- Up to 10 control options
- Slot-independent options
- Integrated microSD card slot
- Integrated STO and SS1-t (SIL3) functional safety, or choose PROFIsafe functional safety by fieldbus
- Use the same options for iC7 series air-cooled system modules, liquid-cooled system modules and enclosed drives

Technical information

- Integrated Ethernet port
- Dual-channel STO SIL3 integrated as standard
- Modbus TCP as standard and other fieldbus protocols optional
- Basic I/O: 6x DI, 2x DO, 2x AI +/-10V/0-20 mA, 1x AO (0-10/4-20 mA), 2x NO/NC RO, 1x NO RO, 1x Thermistor
- One optical fiber pair as communication link with power module or star coupler board
- For more options such as voltage measurement, temperature measurement, relay option, and encoder option, refer to the Functional extensions fact sheet.

Features and benefits

Feature	Benefit
Efficient heat management: heat pipe technology and segregated main cooling channel (back-channel cooling)	– Compact size enables you to pack more power into the space available
Paralleling of 3-phase modules with no output filter required	– Modular and scalable solutions for high powers – Simplified spare unit handling
Lightweight	– Fast integration and serviceability – High vibration robustness
Optional integration unit for output filter integration, enabling back-channel cooling	– Compact size enables you to pack more power into the space available – Fast integration
Pull-out of power unit without removing motor or mains cables, included with integration unit	– Fast integration and serviceability
AuxBus internal network for temperature monitoring of filters	– Exceptional reliability and robustness for increased uptime
Segregated IP54 cooling channel and dedicated PCB area	– Extremely reliable in heavy-duty service, for increased uptime

Key specifications

Mains connection AFE	
Mains voltage U_{in}	– 3 x 380-500 V AC (-15%...+10%); 465-740 V DC
Mains frequency	– 45-66 Hz
Supply network	– TN-S, TN-C, IT and TT
Power factor	– $\cos\phi = 1$: (fundamental)
Short circuit current	– Maximum short circuit current must be < 100 kA
Total harmonics distortion THDi	– < 5%
Overvoltage category	– Class III according to IEC/EN 61800-5-1
Connections to mains	– Once every 120 s
Motor connection (INU)	
Output voltage	– 0- U_{in} 3-phase
Output frequency	– 0-599 Hz (<i>Limited performance with output filters above 70 Hz</i>)
Switching frequency	– 1.5-10 kHz. Default switching frequency 3 kHz DPWM
Motor control principles	– U/f control – Voltage Vector Control (VVC+) – Flux Vector Control (FVC+)
Motor and generator types supported	– Induction/asynchronous motor – Permanent magnet motor – Salient permanent magnet motor – Synchronous reluctance assisted permanent magnet motor
Cable length	– Up to 150 m [492 feet] with symmetrical 3-phase screened motor cable
EMC (IEC61800-3)	
Immunity	– Fulfils IEC/EN61800-3 (2018), 2nd environment
Emissions	– IEC/EN61800-3 (2018), category C4, default for the IP00/UL Open Type drive – IEC/EN61800-3 (2018), category C3, if the drive is installed according to the instructions of the manufacturer
Environmental conditions	
Protection rating drive modules	– IP00/UL Open Type
Ambient operating temperature	– -15 °C to 0 °C (5 °F to 32 °F) (no frost) The highest current rating of AM11 and IM11 must be derated 20% in freezing conditions. – 0 °C to 40 °C (32 °F to 104 °F) (at I_N) with derating up to +15 °C (131 °F)
Storage/transportation temperature	– -40 °C to +70 °C (32 °F to 158 °F)
Relative humidity	– 5 to 96% RH, no dripping water or condensation allowed
Pollution degree	– PD2
Altitude	– 0-4000 m (0-13100 ft) above sea level: in case network is not corner-grounded (Voltage class 5). – Above 1000 m (3300 ft): derating of maximum ambient operating temperature by 1 °C per each 100 m is required.
Vibration (IEC60068-2-6)	– Displacement amplitude 0.5 mm (peak) at 5-22 Hz – Maximum acceleration amplitude 1 G at 22-150 Hz
Shock (IEC60068-2-27)	– Max 15G, 11 ms (<i>in package</i>)
Environmental operating conditions (IEC 60721-3-3)	– Climatic conditions: Class 3K5 – Chemically active substances: IEC 60721-3-3 Edition 3.0/ISO 3223 Second Edition, class C4 – Biological conditions: Class 3B1 – Mechanical conditions: Class 3M3 – Mechanically active substances: Class 3S2 – Special climatic conditions (heat radiation): Class 3Z1
Product safety compliance	
Compliance	– IEC/EN 61800-5-1 + A1; IEC/EN 64477-1 + A1; CSA C22.2 No. 274; UL listed: UL 61800-5-1

Inverter module (INU)

Inverter module (INU)

The inverter module is a bidirectional DC-fed power inverter for the supply and control of AC motors and generators.

The inverter (INU) module is intended for the regulation of motor speed in response to system feedback or to remote commands from external controllers. A drive system consists of the system modules, the motor, and equipment driven by the motor. The INU module is also intended for system and motor status surveillance.

Benefits of the Inverter module

- Designed for maximum machine performance and flexibility
- Versatility for drive applications requiring a wide range of drive features for different motor types for either closed loop or open loop control methods

- Inverter module with integration unit offers optional built-in dU/dt filters and/or high-frequency common-mode filters. These ensure space savings and easy cabinet integration.

Ratings

- 385-4870 A I_L , +10% overload 1 min/5 min
- 380-500 V AC Motor Voltage
- Output frequency: 0-599 Hz
- Switching frequency: 1.5-10 kHz. Nominal 3 kHz

Highlights

- Most compact INU module on the market thanks to integration of filters
- IP54/Type 12 segregated main cooling channel supporting back-channel cooling solutions
- Designed for enclosure integration and quick serviceability
- Integration of common-mode and dU/dt filters in the integration unit
- Slide-in philosophy for power unit installation means you can remove the power unit without disconnecting the motor cable

Motor control

- Highly dynamic performance: Highest possible machine accuracy due to superior shaft performance, also for sensorless operation
- Superior low-speed performance also in sensorless operation
- The motor always runs at maximum possible torque for the given current – ensuring highest possible motor efficiency: Maximum Torque Per Ampere (MTPA)
- Fast commissioning using Automatic Motor Adaption (AMA) at standstill maximizes energy efficiency with any motor
- More integrated sensors for better performance
- Flexible choice of control features optimized to your application, thanks to integrated application software
- Connect to any motor and the drive will adapt: induction motor (IM), permanent magnet motor (PM), or high-efficiency synchronous reluctance motor (SynRM)

AFE modules

AFE module

The AFE unit is a bi-directional low harmonic supply unit for motor drive applications. Active front end is typically used as a supply to a common DC bus drive line-ups or high power single drives when low harmonics or regeneration of power back to the grid is needed/valued.

The main functionality of the AFE is to maintain stable DC-link voltage reference. The AFE transfers power between the grid and the DC bus both ways depending on the load of the DC bus.

To enable low-harmonic and regenerative capabilities, install LCL Filter OF7Z3 on the grid side of each AFE power unit, according to frame.

Benefits of the AFE

- Regenerative energy is fed back to the grid, improving the payback time of the investment. Regeneration at full power is available at any time.

- The AFE can boost the DC-link voltage within the voltage window of the converter hardware. Its advantage is that the DC-voltage available for motor inverters is not limited even under non-ideal grid conditions.
- Power quality is excellent since the grid current is sinusoidal with very low harmonics (<5% THDi) and power factor is unity ($\cos \varphi = 1$).
Avoid oversizing incoming supply transformers, as for traditional diode rectifiers, to reduce investment cost and space.

Ratings

- 317-4900 A I_L , +10% overload 1 min/5 min
- 380-500 V AC / 465-740 V DC
- 45-66 Hz Grid frequency
- THDi <5%
- Fundamental power factor $\cos \varphi = 1$, adjustable reactive current set point

Highlights

- Most compact AFE on the market
- Meets the most stringent harmonics requirements thanks to high DC and AC power quality
- Robust and reliable in varying ambient conditions

- IP54/Type 12 segregated main cooling channel supporting back-channel cooling solutions
- Designed for enclosure integration and quick serviceability
- Direct connection between LCL filter and AFE input terminals
- Slide-in philosophy for easy power unit and LCL filter installation and removal

DC-bus and grid control

- Fast primary control ensures stable DC voltage even under non-ideal grid conditions for accurate motor control.
- AFE is able to boost DC voltage to guarantee full motor voltage even when the supply voltage is below nominal.
- Low harmonic operation meets even the stringest power quality requirements for drive systems.
- Reactive reference can be used to compensate other low power factor equipment in the network.
- Build large drive systems with simple system architecture: Connect power units in parallel and control them with a single control unit
- Increase process uptime thanks to built-in redundancy in AFEs consisting of multiple power units

Enclosed Drives

Need more freedom for streamlined integration?

iC7 series Enclosed Drives open up new application opportunities with flexible system integration in a wide range of industries.

Optimized for compact footprint, ease of use and fast serviceability, you can apply these drives to enhance motor control. A range of variants and options equip you to make precisely the right choices ensuring high performance and local compliance, including harmonic compliance.

Most importantly, you can count on the Enclosed Drives for exceptional reliability, being founded in fully traceable end-to-end quality processes.

Compact

Sophisticated heat management is a key factor endowing the Enclosed Drives with a compact footprint.

These drives are equipped with heatpipe-based thermal management, optional back-channel cooling, and segregated main and auxiliary cooling channels. All of these technologies reduce the drive dimensions, enable reduction of air-conditioning load, and even enable you to cut down on space in the electrical room.

Versatile

iC7 Enclosed Drives are available in standard cabinet sizes, configured in the right variant to suit your application:

- 6-pulse, low-harmonic, and regenerative variants
- Wide range of options

HIGHLIGHTS

- **Streamlined system integration**
- **Fast and safe service access**
- **6-pulse, low-harmonic, and regenerative variants**
- **Intelligent heat management**
- **Modular control**
- **Small footprint thanks to cutting-edge heat management**
- **Wide range of cabinet options**
- **STO and SS1-t (SIL3) for full power range plus optional STO button on door**

Safe

and fast service access

Scalability and speedy service

High power density cooling

You get high power density thanks to superior heat management using heatpipe technology and high-performance heat sinks. Closed air ducts enable flexible mounting, and back-channel cooling supports removal of heat to the surroundings without extra cooling equipment. Remove fans easily for cleaning and service.

Environmental exposure

The iC7 drive delivers exceptional performance under demanding operating conditions, according to the environmental standard IEC60721.

The ability to operate at ambient temperatures ranging from -15 °C to 40 °C (50 °C with derating) ensures the drive meets a broad range of application requirements. With an altitude capability of up to 4000 m (13124 ft) above sea level, you can install this drive in virtually any location.

This robust drive matches the required vibration resistance for operation in cabinets, in control rooms and on machines.

▶ **Accessibility video**

Fast and safe serviceability

Access cables easily with no need to remove the power module.

Service access is extremely convenient and fast with integrated service table, and optional hoist bracket on top of the cabinet. Remove the power module easily, with no need to remove motor cabling. The control compartment door-in-door concept aids safe and fast work and you can swing out the control compartment frame easily to access the power modules.

▶ **Efficient maintenance video**

Modular architecture:

Setting the **standard** for modular **control**

Flexible modular control architecture means you can tailor the control functionality exactly to your needs. You can purchase exactly the control options you need. You can also use drive options as an alternative to external components such as PLC components, I/O and external safety components.

This modularity gives you not only more flexibility, but more secure integration of drives in the control system and IT architecture. You achieve faster set-up, and smarter monitoring, data gathering and analytics thanks to support for multiple communication network types.

The purchase cost is lower since you only buy the necessary control options, saving excess unused functionality. The drive can reduce your costs further by substituting for a low-end PLC controller/system, thanks to its IEC 61131-based control architecture.

Features

- Expandable bus includes I/O, fieldbus, and expanded safety options
- Choose between a variety of control options
- Options are slot-independent with 6 option board slots available
- Integrated microSD card slot
- Integrated STO and SS1-t SIL3 functional safety for full power range
- Optional STO emergency stop button activates STO
- Programmable
- Use the same options interchangeably in all drives in the iC7 series

Technical information

- Integrated Ethernet communication interfaces
- Dual-channel STO SIL3 integrated as standard
- Optional fieldbus protocols
- Standard I/O:
6x DI, 2x DO, 2x AI +/-10V/0-20 mA, 1x AO (0-10/4-20 mA), 2x NO/NC RO, 1x NO RO, 1 x Thermistor input
- Optical fiber as communication link with power module(s)

Features and benefits

Feature	Benefit
Robust by design, high uptime and quality	– Reliable in heavy-duty service
Segregated main cooling channel, (IP21 or IP54) and dedicated PCB area	– Extremely reliable in heavy-duty service
Wide range of pre-designed options	– Flexible to meet any application need
Heat management using heat pipe technology and segregated main cooling channel	– High power density, reduced footprint
Integrated options such as functional extensions, output filters, fuses and disconnects mean no extra external devices are required	– Save cost and time in installation
Installer-friendly design includes pluggable control terminals, easy-access power terminals, and easily replaceable fans	– Save cost and time in installation and service
Modular and scalable solutions for high powers Simplified spare unit handling	– Fast integration and serviceability
Pull-out of power unit without removing motor or mains cables, included with integration unit	– Fast and easy serviceability
Safe door-in-door access to the control compartment	– Safe and fast serviceability
Integrated functional safety: STO and SS1 (SIL 3) for full power range plus optional STO button on door	– Low-complexity functional safety

Ensuring you shine in the marketplace is our goal. Learn how Danfoss supports your success [here](#) 

Key specifications for 6-pulse, low-harmonic or regenerative enclosed drives

Environmental	6-pulse	Low-harmonic & regenerative
Voltage rating	3 x 380-500 V AC, -15%/+10%	
Current range	206-588 A	385-1710 A
Overload capacity	110/150% for 1 minute every 5 minutes ¹⁾	
Protection rating	IP21/UL Type 1, IP54	

¹⁾ 1 minute every 10 minutes, for frames FE9 and FE10
1 minute every 5 minutes, for all other frames

Technical data ¹⁾

Input	
Voltage rating	380-500 V AC, +10%/-15%
Supply frequency	50/60 Hz
Switching on input ²⁾	6-pulse: 1-2 times per minute Low-harmonic and regenerative: Switch on twice at 60 s interval, followed by 10 minutes cooling-down period
Grid type	TN, TT, IT, Delta

Output	
Output frequency	0-599 Hz
Switching on output	Unlimited
Overload capacity	110% and 150%

Environmental conditions	
Rated temperature	-15 to 40 °C (5 to 104 °F)
Maximum temperature with derating	50 °C (122 °F)
Rated altitude	1000 m (3300 feet) or up to 4,000 m (13,124 ft) with derating
Relative humidity	5-95% non condensing

Functional Safety I/O	
STO	Dual-channel, with galvanic isolation
STO feedback	Single channel, with galvanic isolation

External supply	
Rating	24 V/2 A

Basic I/O	
Digital inputs	6, single-ended
Relay outputs	3 • 2 x NO, NC • 1 x NO • 250 V AC 3 A max. (50/60 Hz) • 24 V DC 2
Analog inputs	2 • -20/0 to +20 mA or • -10/0 to +10 V
Analog output	1 • 0-20 mA or • 0-10 V resistive load
Thermistor input	1, isolated

Compliance	
Compliance	IEC 61800-5-1

¹⁾ Preliminary values pending validation.

²⁾ Refer to Design Guide for more information.

³⁾ 2 of the inputs can be reconfigured to outputs

Control options

Functional extensions	Description
General Purpose I/O OC7C0	General purpose I/O extension board (3xDI, 2xDO, 2xAI, 1xAO)
Relay Option OC7R0	Relay I/O extension board, with 3 relays
Encoder/Resolver Option OC7M0	Encoder/Resolver extension board (TTL, HTL, SinCos, SSI, HIPERFACE, EnDat, BiSS, resolver)
Temperature Measurement OC7T0	Temperature measurement extension board with 5 channels
I/O and Relay Option OC7C1	I/O extension

[5] Product type (character 9-10)	
3N	6-pulse rectifier
3A	3~ regenerative, AFE
3H	3~ low harmonic AFE
IN	Inverter module, INU
[6] Voltage rating (character 11-12)	
05	380-500 V AC
[7] Nominal Amp rating ²⁾ (character 14-17)	
-206A	206 A
-245A	245 A
-300A	300 A
...	...
-1710	17100 A

¹⁾ +codes identifying options

²⁾ See rating tables on page 40

[8] Protection rating (character 18-20)		Enclosed Drives
E21	IP21	■
E54	IP54	■
[9] EMC Class (character 21-22)		
F2	C2 category: Public & industrial environment	
F3	C3 category: industrial environment	■
F4	C4 category: System Component (IT Network)	■
[¹⁾] +code group		
+Axxx	Optional power hardware	
+Bxxx	Control hardware	
+Cxxx	Control options	
+Dxxx	Application software and additional functionality	
+Exxx	Customized settings (for reference only)	

+AExx Optional power hardware: Integration unit options

Model code	Selection description	Inverters	Active Front Ends
+AEXX	None	X	X
+AE01	Short, no filter	X	X
+AEC1	Short, with CM filter	X	-
+AE10	Standard, no filter	X	X
+AEU1	Standard, with dU/dt filter	X	-
+AEU2	Standard, with dU/dt and CM filter	X	-
+AEC2	Standard, with CM filter	X	-

+BAXX Control hardware: Communication interface, X1/X2

Model code	Selection description	Enclosed Drives
+BAEL	Ethernet port, no protocol	X
+BAPR	PROFINET RT OS7PR	X
+BAMT	Modbus TCP OS7MT	X
+BAIP	Ethernet/IP OS7IP	X

+Cxxx Control options (Option slots Ato F)

Model code	Selection description	Open slots A-E (Inverter)	Open slot F (Active Front End)
+CXXX	None, without mounting plate	X	-
+CXX0	None	X	-
+CXC0	General Purpose I/O OC7C0	X	-
+CXC1	I/O and Relay Option OC7C1	X	-
+CXR0	Relay Option OC7R0	X	-
+CXM0	Encoder/Resolver Option OC7M0	X	-
+CXT0	Temperature Measurement OC7T0	X	-

X indicates a standard selection
A dash (-) indicates that the selection is not available

See full list of options for each +code group in Design Guide

Danfoss

ENGINEERING
TOMORROW

Imagine versatile and highly secure power conversion and motor control.
Intensely powerful and compact converters and drives built to optimize a vast range
of systems while giving you the flexibility to distribute intelligence the way you want.
Paving the way for a new dimension, where open, connected and intelligent
systems are the new reality.

 **Open up a new dimension with iC7 series**
iC7-Automation | iC7-Marine | iC7-Hybrid
